Architectural Design and Trends for Multifamily Housing: Creating Housing for America

Multifamily housing has weathered the housing downturn much better than its single family counterpart. As America seeks to become more energy and environmentally friendly, and as consumers are either forced to rent longer before buying or simply choose to rent because it fits their lifestyle, there will be an increased interest in multifamily housing as an option for America. Sanford Steinberg and his award-winning team at Steinberg Design Collaborative have successfully been involved in the design of over 2,500 projects throughout the country encompassing over 600,000 residential housing units. Steinberg is a member of the American Institute of Architects and is an NAHB Certified Green Professional. He is a trustee on the NAHB Multifamily Trustee Board, national chairman of the AIA Residential Knowledge Community and past national chairman of the NAHB Design Committee.
